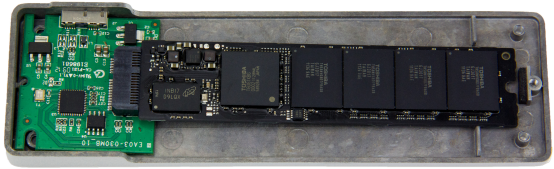
Remove the top cover and you will expose the interposer board inside of the OWC Mercury Aura Envoy.



Insert your SSD module into the interposer board connector - it is keyed so it will only fit one direction. The drive module plugs straight into the connector and fits snugly.

Replace the bottom cover onto the Mercury Aura Envoy. Reinsert the 2 Phillips screws through the bottom and apply the 2 rubber feet to complete the assembly.

Your Mercury Aura Envoy connects using the included USB cable. if your SSD module is unformated, you will need to format it to be able to use it.

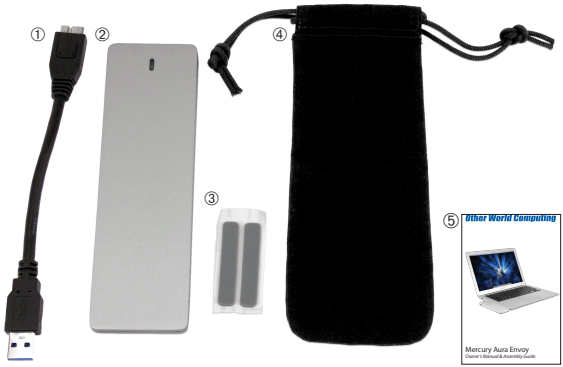
•Apple MacBook Air 2010 - 2011 SSD Drive Module



Item
① USB 3.0 (A - Micro-B) cable
② OWC Mercury Aura Envoy
③ Adhesive Rubber Feet
④ Plush Storage Bag
⑤ Owner's Manual & Assembly Guide

Your computer is a static-sensitive device. It is susceptible to invisible damage if not protected during installation.

We recommend proper grounding by using a grounding strap. Make sure to work in a clean and static-free area, and avoid wearing clothing that retains static charges.

The OWC Mercury Aura Envoy is only compatible with the factory original MacBook Air 2010-2011 SSD modules. Do not use it with the OWC Mercury Aura Pro SSD module or any other 3rd party module - you will damage both the SSD and the enclosure.

Using a Phillips P0 screwdriver, remove the 2 Phillips screws that are holding the top and bottom of the OWC Mercury Aura Envoy together. Note they are two lengths, the short screw goes on the skinny end of the Aura Envoy, and the longer screw goes on the thicker end.
